

Why buy DV-96+:

- 1) The system capacity can be expanded from 16 CO, 66 extensions (one cabinet) up to 32 CO, 130 extensions (two cabinets). The external lines can be as 42 lines if installed with one ISDN E1 card.
- 2) All existing cards for DV-96, such as the Trunk card, Station card and peripheral card, can be used for the DV-96 + except additional D2EPUA (Expansion card). The related cards for master cabinet and Slave cabinet are exactly same. This will save the hardware inventory.
- 3) Only one internet connecting cable CAT-5 will be required between two cabinets. It is easy to install and maintain. The master cabinet can work properly even the slave cabinet was shut down.
- 4) All cards are built-in the system. The transmission and transfer have no block and correct.
- 5) Provides the virtual extensions function so all calls will not missing.
- 6) Provides the baby extension function either of wireless phone or mobile phone.
- 7) Built-in Voice Service Card, Voice Mail Card to support the recording features.
- 8) Compatible to built-in ISDN BRI/PRI card, GSM card and external VoIP Gateway to access the internet.
- 9) Supports LCR/ARS, SMDR and save the phone bill and enhance the management.
- 10) Optional CLI card to display the incoming caller number in despite of the incoming lines, DISA, operator or other extensions.
- 11) Easy operation through Windows-based SM.
- 12) Integrated with the ISP application to save the phone bill.
- 13) Provides simple version of hotel software.
- 14) Based on the existing DV-96 systems, the performance of DV-96+ is stable enough.
- 15) Competitive price in comparison to the other similar system configuration.
